

HOW FAIR IS JUSTICE IF IT'S  
IMPOSSIBLE TO USE?

# Mission:

By 2030, **150m** people will be able to prevent or resolve their most pressing justice problems

**Mobilize everyone, everywhere**

**Demand urgency and ambition**

**Design new innovations and solutions**

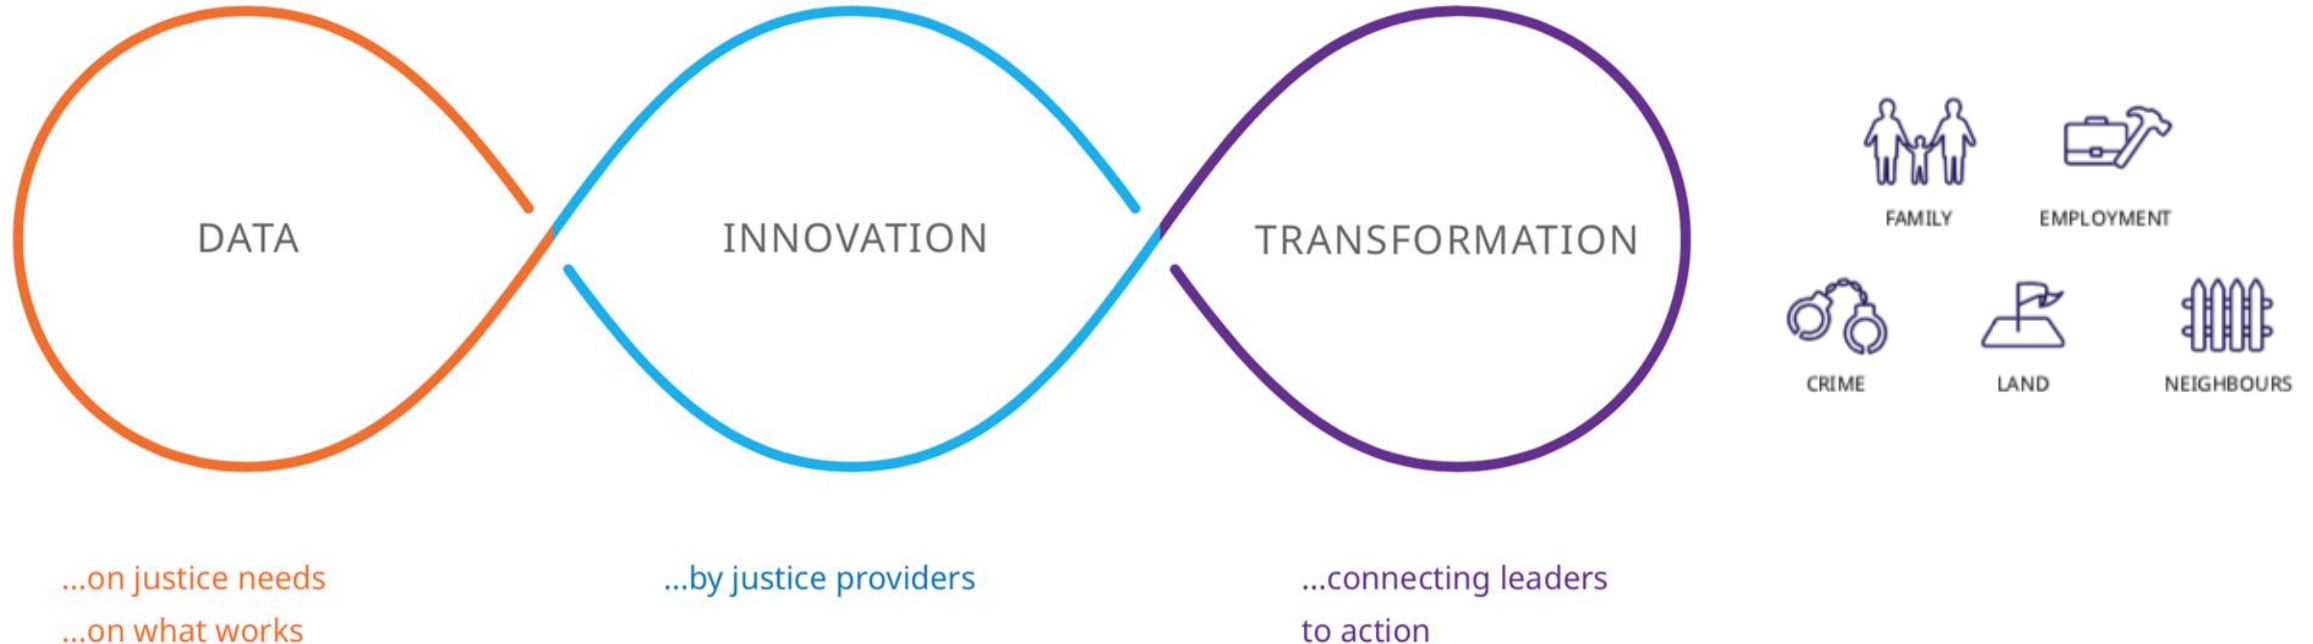

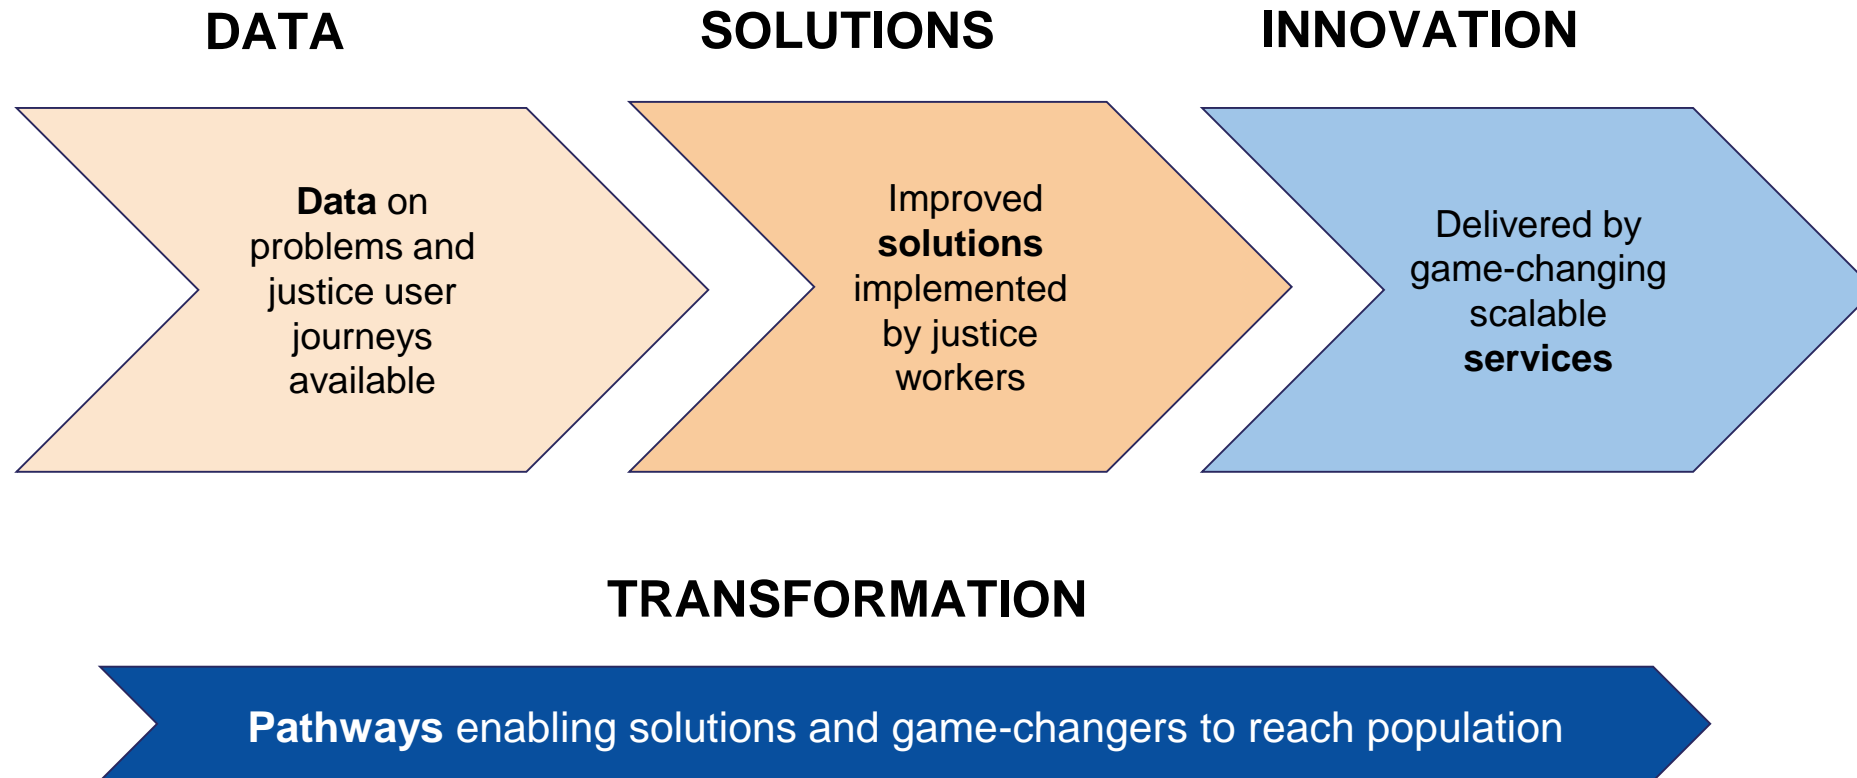

**We need gamechangers**

# We develop people-centred justice solutions

Transforming the justice sector with break-through innovations

With data and technology we co-create **user-friendly justice** based on what we need *now*. Justice that is *affordable*, *accessible* and *easy to understand*. **People-centred** means solutions that focus specifically on preventing or resolving people's justice problems (or SMEs).

# Game-changers

7 types of justice innovation that have the potential to have scaled impact

**Community Justice Services**

**User friendly Contracts**

**One Stop Dispute Resolution**

**Problem Solving Courts**

**Claiming Platforms**

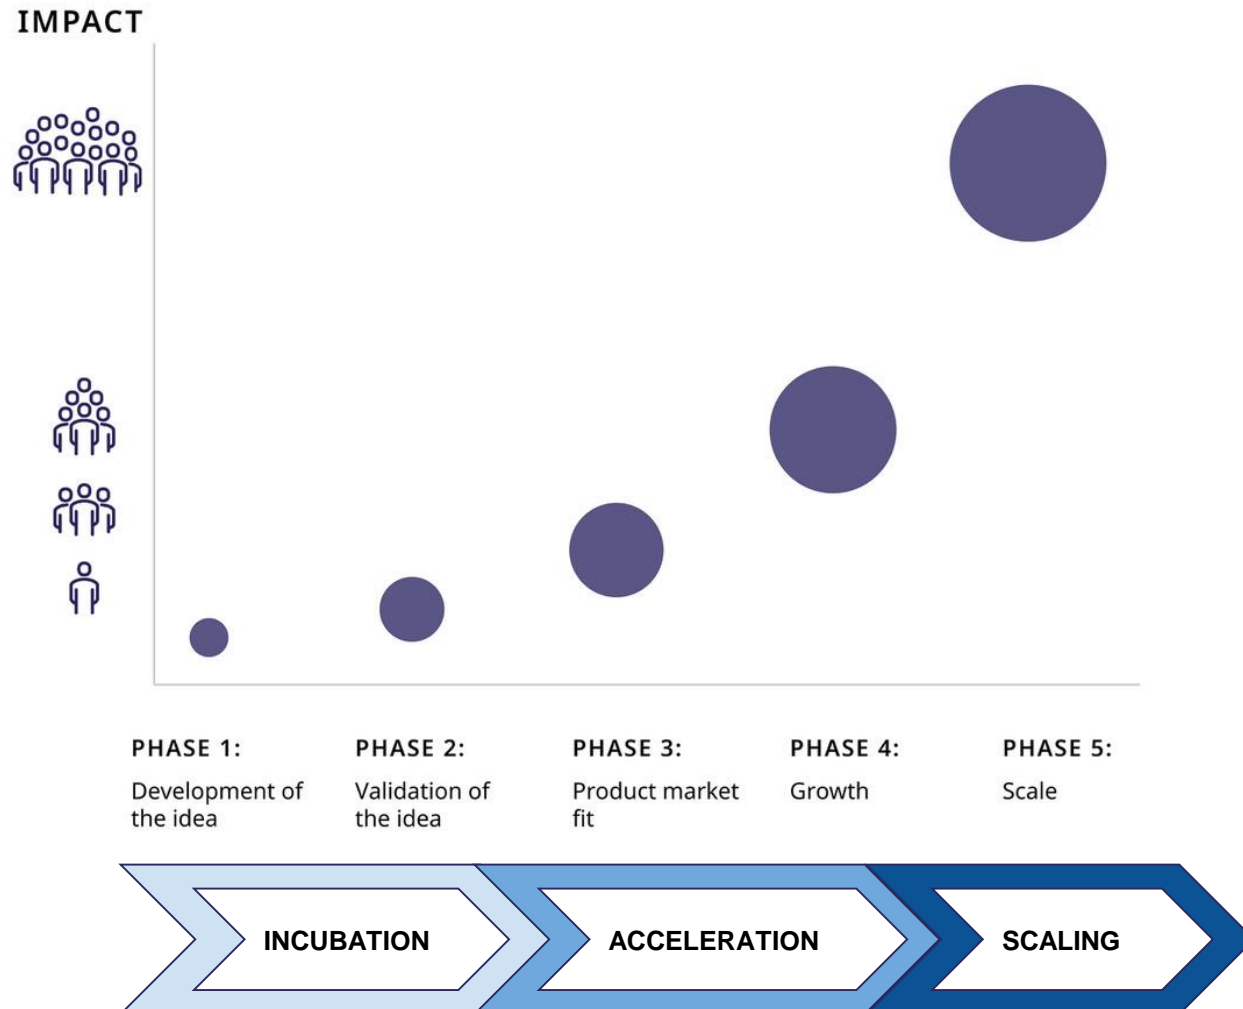

**Prevention Programmes (fraud, violence)**

**Legal Information**

# Justice Innovation Support

Scaling justice startups from idea to massive impact

## The Hiil Justice Accelerator

The only accelerator world-wide focused on SDG16.

Circles: ideation, paradigm shift and community co-creation

Incubation: hackathons and early stage training

Acceleration: business, impact and leadership training + seed funding

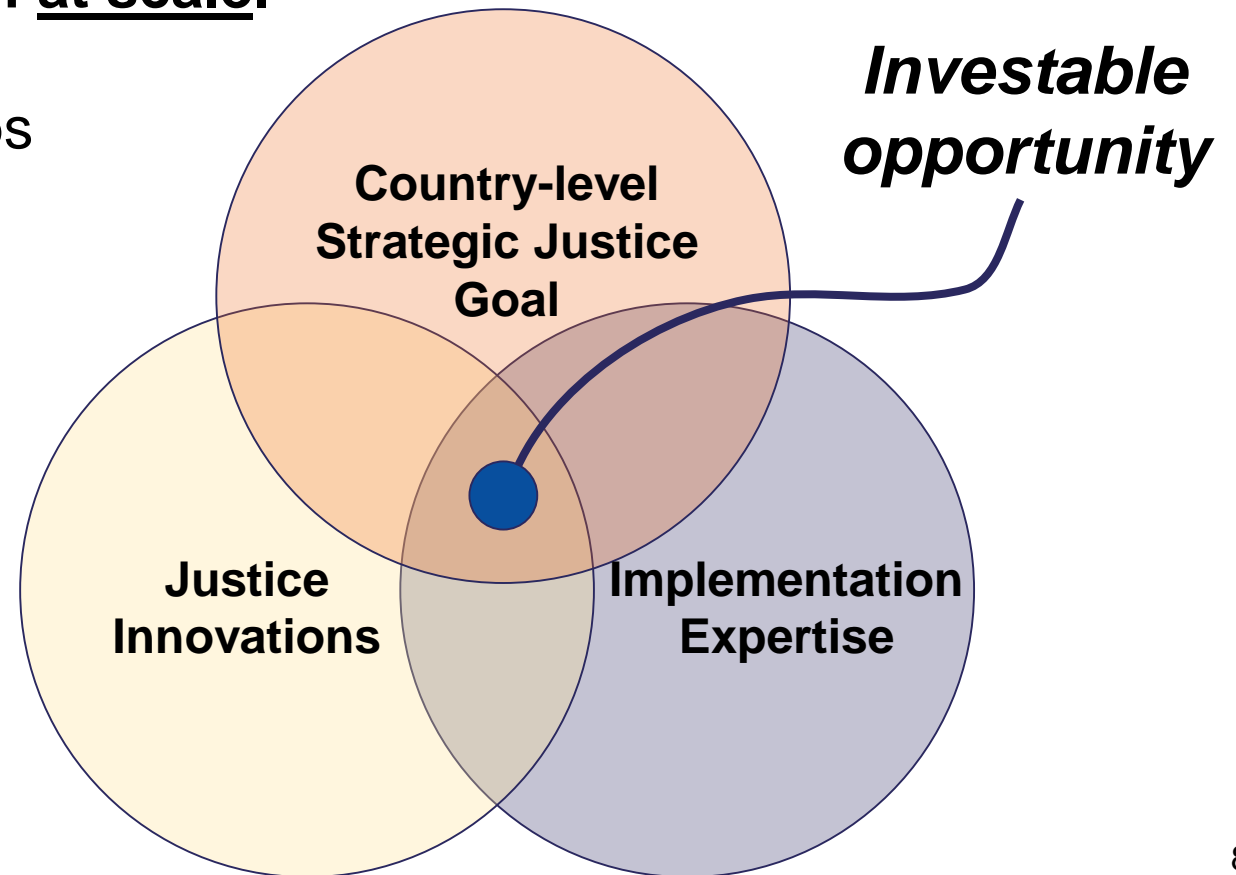

Scaling: investment readiness

# Justice Nexus Innovation Labs

Scaling justice innovation country-wide

**Design an investable opportunity to implement a game-changing justice innovation in a specific country or region at scale.**

- A series of co-creation design workshops
- with key stakeholders from government, private sector and civil society
- supported by experts in the justice sector , political systems, sustainable finance and innovation and technology.

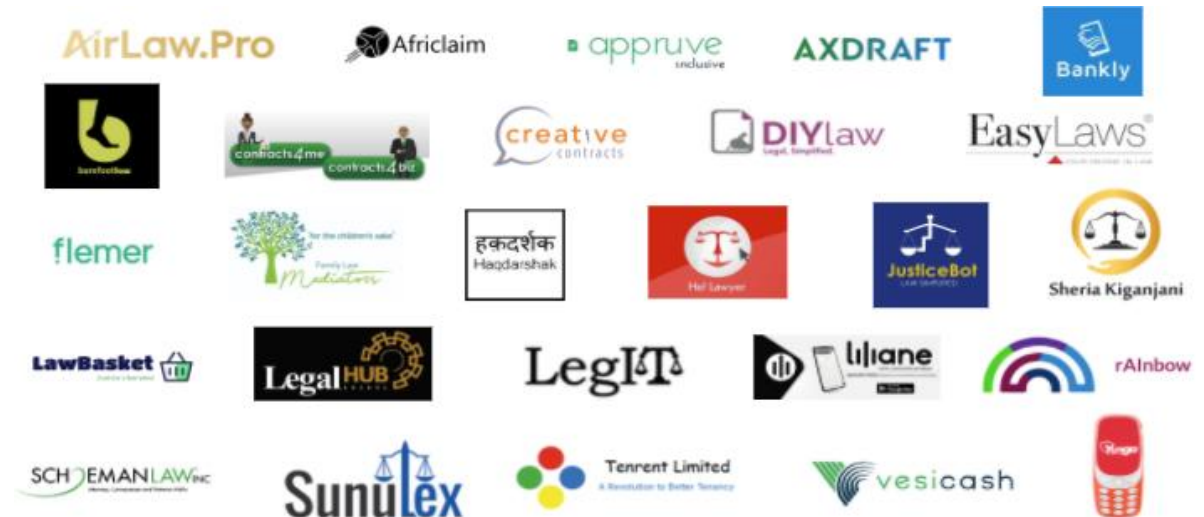

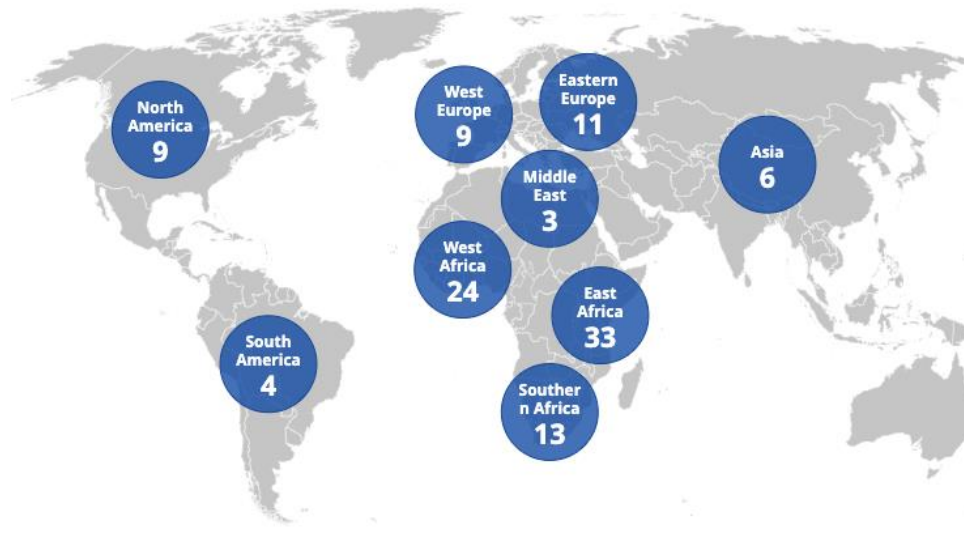

# Justice startups are ready to deliver

We build justice ecosystems - one startup at a time

Since 2011, 125+ startups have been supported globally! Each year 500+ startups apply to the [Innovating Justice Challenge](#), out of which a new cohort of 15 - 20 joins our community.

# We are a community of innovation hubs

That scouts, trains and grows startups directly in the region.

**We set up regional Hubs that build local justice ecosystems by implementing our activities over many years.**

We have hubs in

- West Africa (Lagos)
- East Africa (Nairobi)
- Southern Africa (Jo'burg)
- Uganda (Kampala)
- MENA (Tunis)
- Ukraine (Kyiv)

# Challenges

1. Justice innovation is very niche hence not many investable StartUps exist. We have been building the ecosystem for the last 10 years.
2. Formal legal and justice systems are reluctant to adopt innovations beyond digitization of their current processes. Hence the need for a robust transformation and change management process
3. Justice systems are political and institutional. Hence the achievement of SDG 16.3: Access to Justice also heavily relies on getting politicians and institutional gatekeepers on board.
4. There is a need to build technical and business capacities for Justice practitioners whilst at the same time including different players in the tech, social science and business fraternity.

# Importance of Justice Innovation in Advancing People-centred Justice

1. Justice innovation **enhances access to justice** services by making it **convenient** for claimants.
2. Justice problems are resolved expeditiously hence saving on **time** and **effort**.
3. Justice innovation provides **affordable** legal services which saves on **cost** of pursuing justice.
4. Justice innovation ensures **improved quality of justice procedure and outcome** which promotes **fairness**.
5. Justice innovation alleviates the **negative impact of incomplete justice journeys** such as mental stress, loss of income, loss of time and damaged relationships.
